

Version History for Version 10.01.09

Version Notes:

If you are coming from version 10.01.05 through 10.01.07, this version will require a restructure of the Billing Detail file. This may take a few minutes to process. However, if you are coming from an earlier version than 10.01.00, installing this update will automatically restructure and rebuild your data files. Be prepared for this to take some time. If your data is very large, this could take hours to complete. Please schedule a time when you can allow the system to do its work uninterrupted. Remember to make a backup of your data before installing any update.

Bug #	Component	Issue
5989	ANSI	OTAF not calculating correctly.
5960	EMR - General	Dispense Spelled incorrectly on encounter form
5988	Exam Word Lists	Deleting a wordlist causes problems when you try to add another with the same code.
5969	General Application	Location and Room fields needs to be saved based on the windows users.
5975	General Application	Program is remembering the Location even if you uncheck that check box.
5986	General Application	Last Seen Date updates for all billing events. Now the Last Seen Date will only update when a "CH" or procedure Code Type is used.
5983	Transaction Entry	Provider field looks blank. The data is present, but not showing properly. Fixed.
